Art. 124.--The average dimensions for the rim and arms of a bevel wheel may be thus stated--see No. 2, Drawing P, which is a front elevation and section of a portion of a bevel wheel--Make the thickness of rim through the centre a b equal to half the pitch. Make the thickness (breadth) of face arm A and cross arm B equal to the thickness of rim at e. The terms breadth and depth have been employed in the illustration of spur wheels in the same sense as for the strength of materials; a beam, for instance, has length, breadth, and depth breadth being synonymous with thickness, and depth with breadth: thus the breadth of a plank put...
