

The theory of strains in girders and similar stuctures with observations on the application of theory to practice and tables of the strength and other properties of materials Volume 1

Filesize: 6.36 MB

Reviews

Extensive guide! Its this sort of very good study. It is actually full of knowledge and wisdom I found out this pdf from my i and dad suggested this ebook to understand.

(Melany Bogisich)

THE THEORY OF STRAINS IN GIRDERS AND SIMILAR STUCTURES WITH OBSERVATIONS ON THE APPLICATION OF THEORY TO PRACTICE AND TABLES OF THE STRENGTH AND OTHER PROPERTIES OF MATERIALS VOLUME 1

DOWNLOAD

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 52 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1869 Excerpt: . . . thrust of the lower flange against the abutment is equal and opposite to the pull of the upper flange, so that they form a couple whose tendency is to overturn the abutment on its lower edge next the weight. 149. Strains In braced webs may be deduced from shearingstrain. --When the flanges are parallel and the bracing consists of a single system of triangulation, the strain in any brace is equal to the shearing-strain multiplied by $\sec \theta$. Hence the strains in the bracing might be deduced from the shearing-strain in the web calculated in the manner explained in Chap. II. (14, 18). The method of the resolution of forces just described is, however, better calculated to give a correct perception of the properties of diagonal bracing, and it has moreover the advantage of being applicable to lattice girders as well as those whose bracing consists of a single system of triangles. See the table in 236 for the numerical values of the tangents and secants of different angles. 150. Web. --Let W the weight of so much of the load as covers one bay, i. e. , the weight resting on each apex of the loaded flange (146), n the number of these weights between any given diagonal and the outer end of the girder, 2 the strain in the given diagonal, F the strain in any bay of either flange, B the angle which the diagonals make with a vertical line. W The weight on...
