Reviews

Definitely one of the better publication I have got possibly read. It really is writter in basic phrases and not difficult to understand. You wont sense monotony at anytime of your respective time (that's what catalogs are for about if you request me).

Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1866 Excerpt: .distance of the fixed line from the centre of the fixed circle. It will be seen that Newton s method of drawing the Cissoid fulfils this condition, which is also evident geometrically. The word difference may be taken in its algebraical sense. Writing in (A) $\tan \theta$ for m , putting c for $-r$, and still taking $a = 0$, $6 = 1$, we have $(y+c) (y \sin \theta + x \cos \theta) - Jc (c - k \sin \theta)^3 + (y + c)^2 - k^2 (\text{asin}^9 - y \cos \theta)^2 = 0$. After some easy reductions, we can divide out $y + c + k \sin \theta$, leaving $(y+c-k \sin \theta) x^2 + y^2 - k^2 (y - c - k \sin \theta) - 2kc (y \sin \theta + x \cos \theta) = 0$ (D), a general equation for circular cubics having a double point, that is to say, the pedal curve of a parabola. Suppose, in fact, that we take a line parallel to the real asymptote for the axis of, the equation of a circular cubic may be written $(y + A) (x^2 - y^2) - Bx + Cy + D = 0$. Besides the Cissoid and other known curves, Dr. Booth s Logocyclic Curve is included in the class here represented. We have to make $6 =$, $c = -k$. VOL. II.--NO. 17. L Let a , y_1 be the coordinates of the double point, then we have $x_1 + y_1 + 2y_1(y_1 + A) + C = 0$, $A + y_1 + 2Bx + 2Cy_1 + 3D = 0$, $2iB_1(y_1 + A) + B = 0$; or putting $c - k \sin \theta$ for A , we have $B = -2/fccc \cos \theta$, $C = 2 \text{csin} \theta - F$, $D = c + A \sin \theta$. These results agree with the equation (D). Fig. (2) represents...
