Johns Hopkins University Press. Paperback. Book Condition: new. BRAND NEW, Genomic Medicine: Articles from the "New England Journal of Medicine", Frances S. Collins, Jeffrey M. Drazen, Alan E. Guttmacher, Elias Zerhouni, "Fifteen years ago, many questioned the wisdom of sequencing the human genome. There were concerns not only about the technical feasibility of such an effort, but also that its scientific worth would prove too modest to warrant the investment of human and financial capital that the project would require. This collection of essays stands as eloquent testimony to those who overcame such doubts to create, nurture, and finish the sequencing of the human genome in April 2003, a date that will forever stand out in human history. The wide and public availability of the human genome sequence and the other tools spawned by the Human Genome Project have helped to create an unparalleled era of biomedical discovery. It has opened up new avenues for the understanding of the biology of human health and disease. Many of these avenues remain to be fully explored, but this volume already demonstrates that information about genetics and genomics is increasingly permeating our clinical approach to patients."-from the Foreword by Dr. Elias Zerhouni For more than a century, knowledge about the role of genes has been gradually reshaping perceptions of our health and of ourselves. From Mendel's work with plants and Watson and Crick's model of DNA's double-helix structure to the recent decoding of the human genome, the tremendous advances in our ability to analyze and interpret gene sequences are revolutionizing many aspects of medicine. Genomic Medicine collects and updates an acclaimed series of articles published in the pages of the New England Journal of Medicine since November 2002 that together provide an authoritative and comprehensive overview of the latest developments in the field...
